

should include more examples

Good for knowledge improvement

Keep up the good work!

Good information for preparing test or exam question.

good input

not interactive

Very informative and eye opening. tqvm

Good courses!

Require 3rd session (tos vs questions vs assessment)

it is a good training

The slide is too wording. Can't really focus on which to see/read on slide during the presenter explanation.

everything is ok

OK

1) The session today is more friendly (it should not be some researchers' perspectives like the previous session).

2) Need to simplify the content presented that seems too much to swallow (tendency to lose focus after some time).

3) Make the theories easier for users to implement using simple examples.

4) Avoid using vague statements that may lead to confusion (at one time suggested to use up till level 4, other time recommended level 5).

5) Please remind our lecturers that the speaker's merely provide guidelines. However, it should not be necessary to adopt what been taught if we already met minimum requirement of the Bloom's Taxonomy.

time consuming with class full

The presentation is interactive and responsive to the participants.

add more example of student manuscript answers with the given exam questions samples

Great

good

None

very good explanation

Very nice sharing

Good knowledge as guideline to construct and evaluate assessment for the courses.

The training very informative. However, my suggestion probably to show an example on how to construct a question test/final with suitable verbs especially calculation question. (ie Calculate, determine etc)

ok

good session

If this training has more examples, it would help us to use as a guideline for developing our test item.

okay

This is a different type of approach and suggestion to prepare any student evaluation

need to have slide pdf

Overall is a good presentation and it helps us to implement for the assessment

It's getting too complicated...

Gives a good insight on what to look at when conducting evaluations.

---

Keep the contents as they are.

Good sharing.

This session is very useful and the instructor delivery more smooth than previous session (part 1)

Good

So far so Good

Great sharing and surprising info

It is better if the workshop is using examples from our final exam questions so that we can write balanced knowledge/cognitive questions, and develop analytic rubrics for our questions accordingly.

It was a good training. Thanks

---
